

Oemof Workshop Week

Basics

Martha Hoffmann

Session I

RLI, 16.09.2019

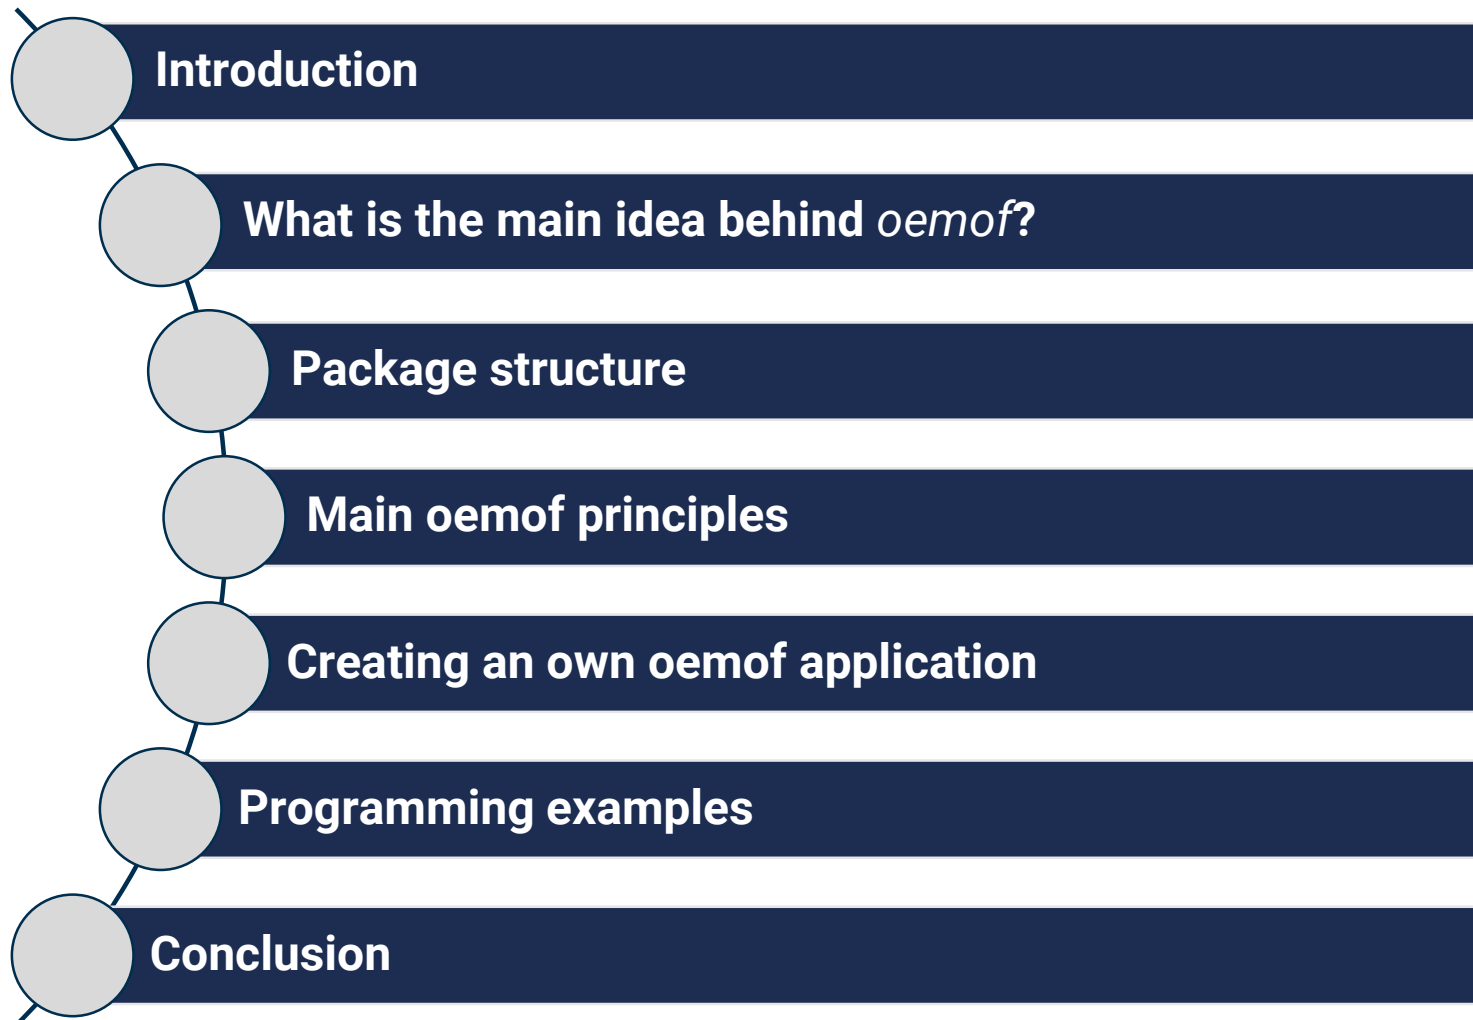

oemof
['ø:moɪ]

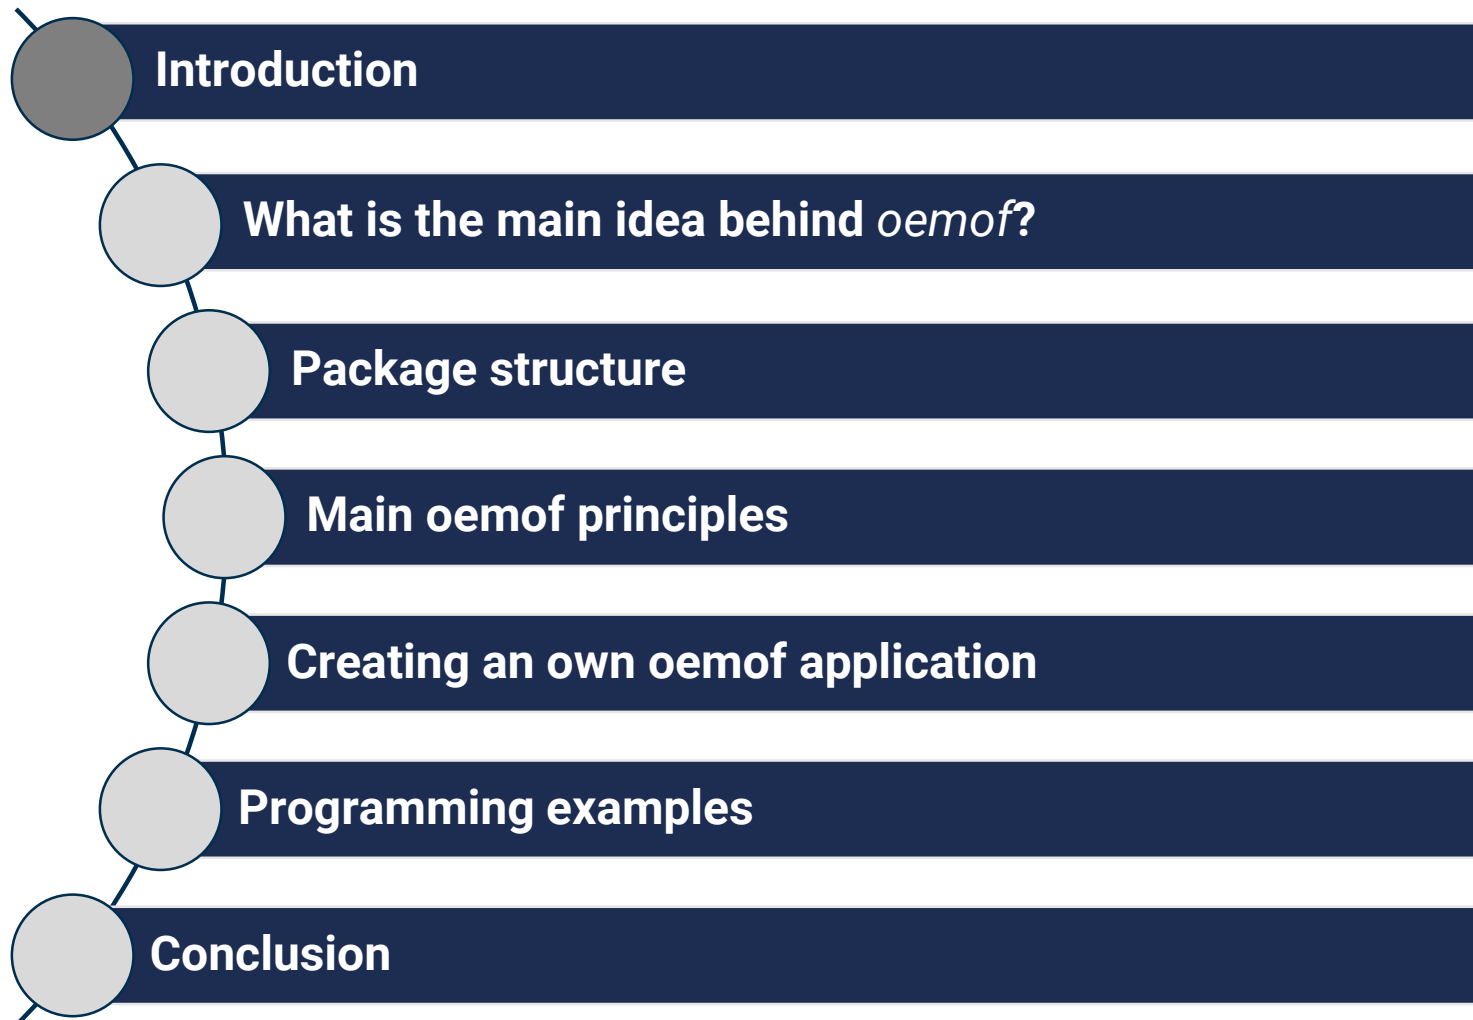

Theoretical and practical introduction to using oemof

All workshop contents at: https://github.com/smartie2076/oemof_workshop

Agenda

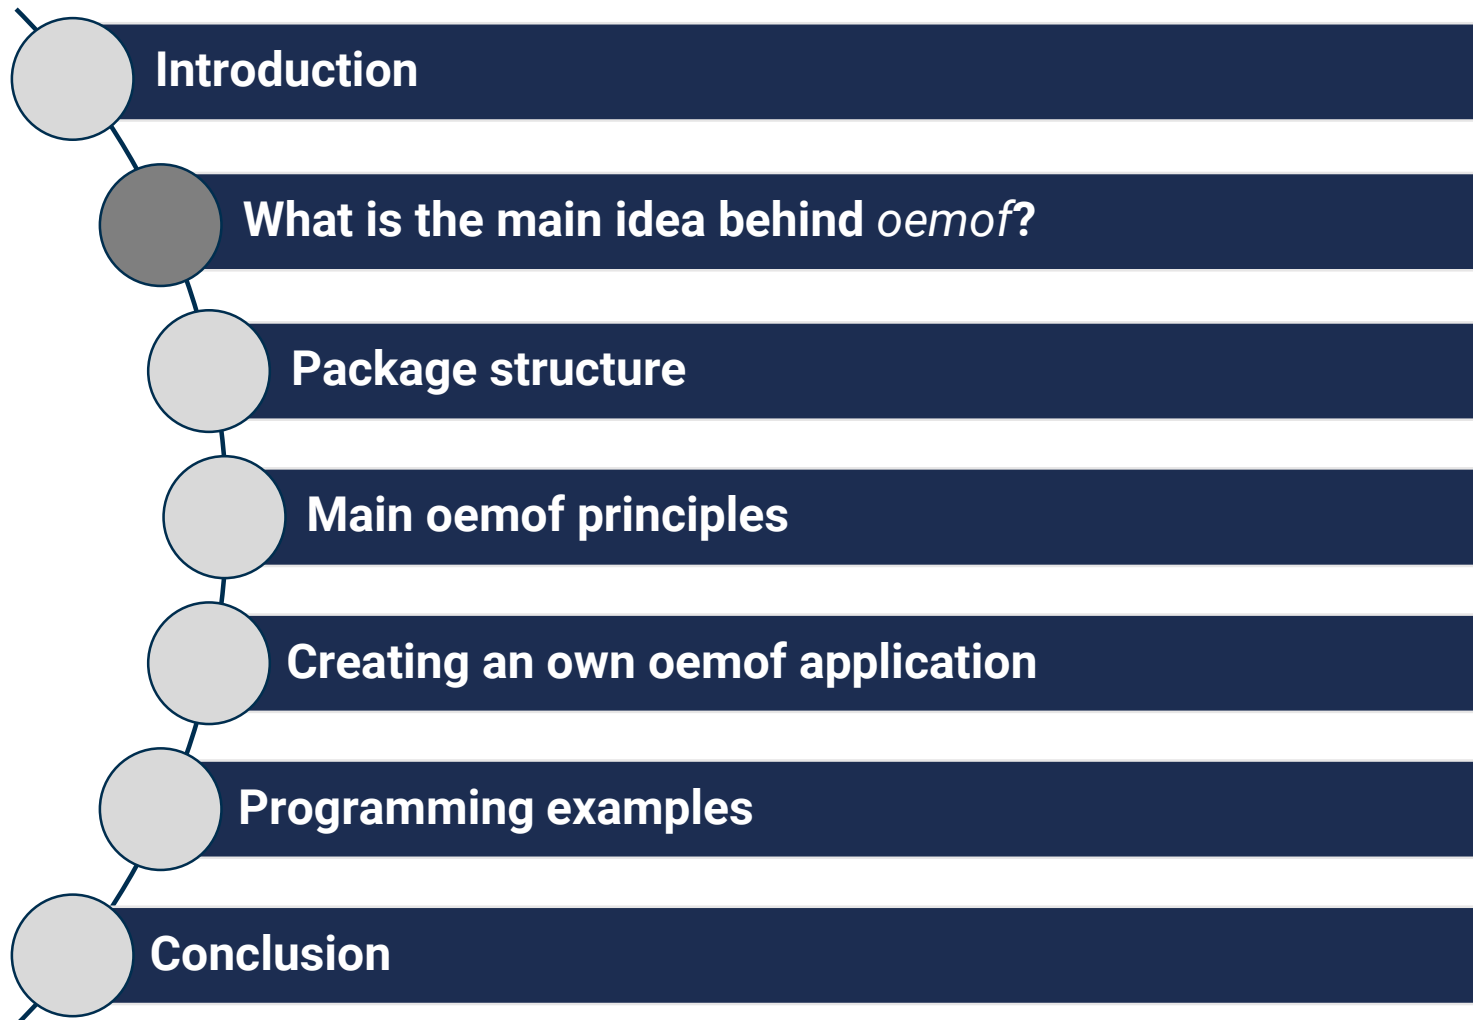

Agenda

Open source software is crucial to ...

- ▶ meet scientific standards in software based research
- ▶ foster bottom-up approaches by reducing barriers associated with high license cost of proprietary software tools
- ▶ improve research quality & completeness & knowledge pooling due to collaborative modelling

Agenda

What is the main idea behind *oemof*?

- ▶ Collaborative, public development
- ▶ Recycling and expansion of existing models
- ▶ Modular structure with defined interfaces to correlate other approaches/packages
- ▶ Improved review process by the community

collaborative

modular

open source

What is the main idea behind *oemof*?

- ▶ Community-driven open-Source modelling framework initiated by:

- ▶ Python package/library specifically developed for energy system modelling
- ▶ Model individual requirements/aspects in research projects, dissertations, Bachelor/-Master thesis
- ▶ Official website: <http://oemof.org>

Oemof projects at RLI

- ▶ Research projects
 - ▶ Publicly funded by EU,
 - ▶ BMWI, BMWF
- ▶ Research studies
- ▶ Contract work
 - ▶ Model development
 - ▶ Workshops
 - ▶ Web-applications
- ▶ General oemof uses:
<https://oemof.org/projects/>

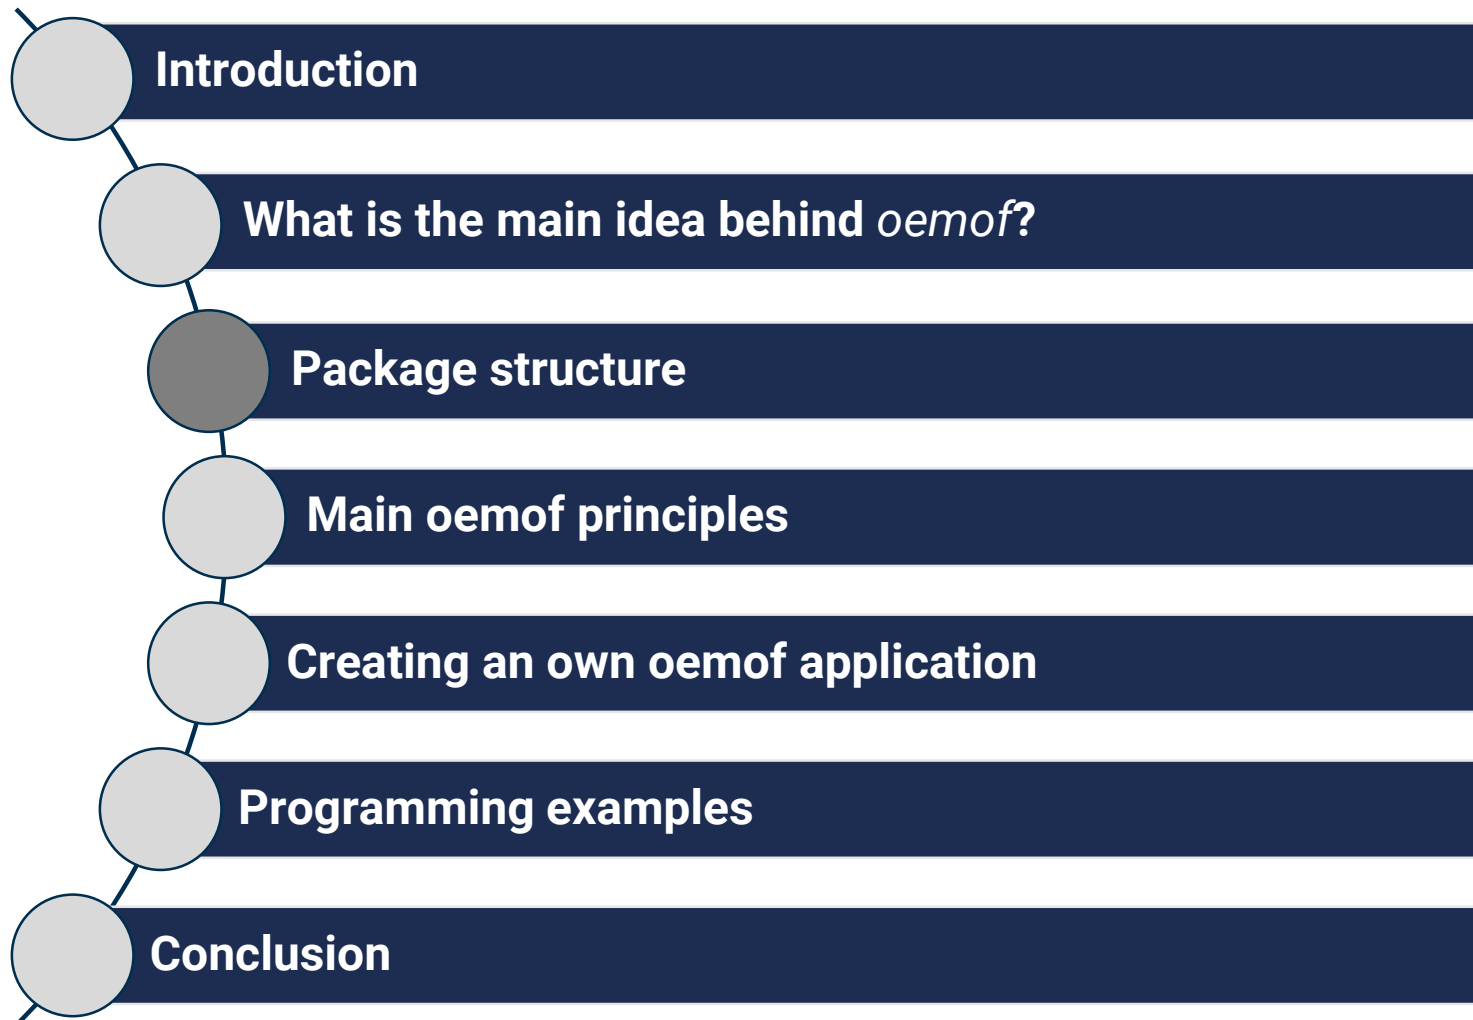

Gefördert durch:

aufgrund eines Beschlusses
des Deutschen Bundestages

Agenda

Github repositories of oemof

- Oemof toolbox on github: <https://github.com/oemof>

The screenshot shows the GitHub profile of the 'oemof organisation'. The header includes navigation links like 'Features', 'Business', 'Explore', 'Marketplace', and 'Pricing', along with a search bar and 'Sign in'/'Sign up' buttons. The profile section displays the 'oemof organisation' logo, a description 'Open Energy Modelling Framework - A modular open source framework to model energy supply systems', location 'Germany', website 'https://oemof.org', and email 'oemof@rl-institut.de'. Below this, it shows '9 Repositories' and '12 People'. The 'Pinned repositories' section lists six repositories: 'oemof' (Python, 57 stars, 31 forks), 'feedinlib' (Python, 21 stars, 6 forks), 'demandlib' (Python, 3 stars, 2 forks), 'oemof_examples' (1 star, 4 forks), 'tespy' (Python, 3 stars), and 'organisation' (2 stars).

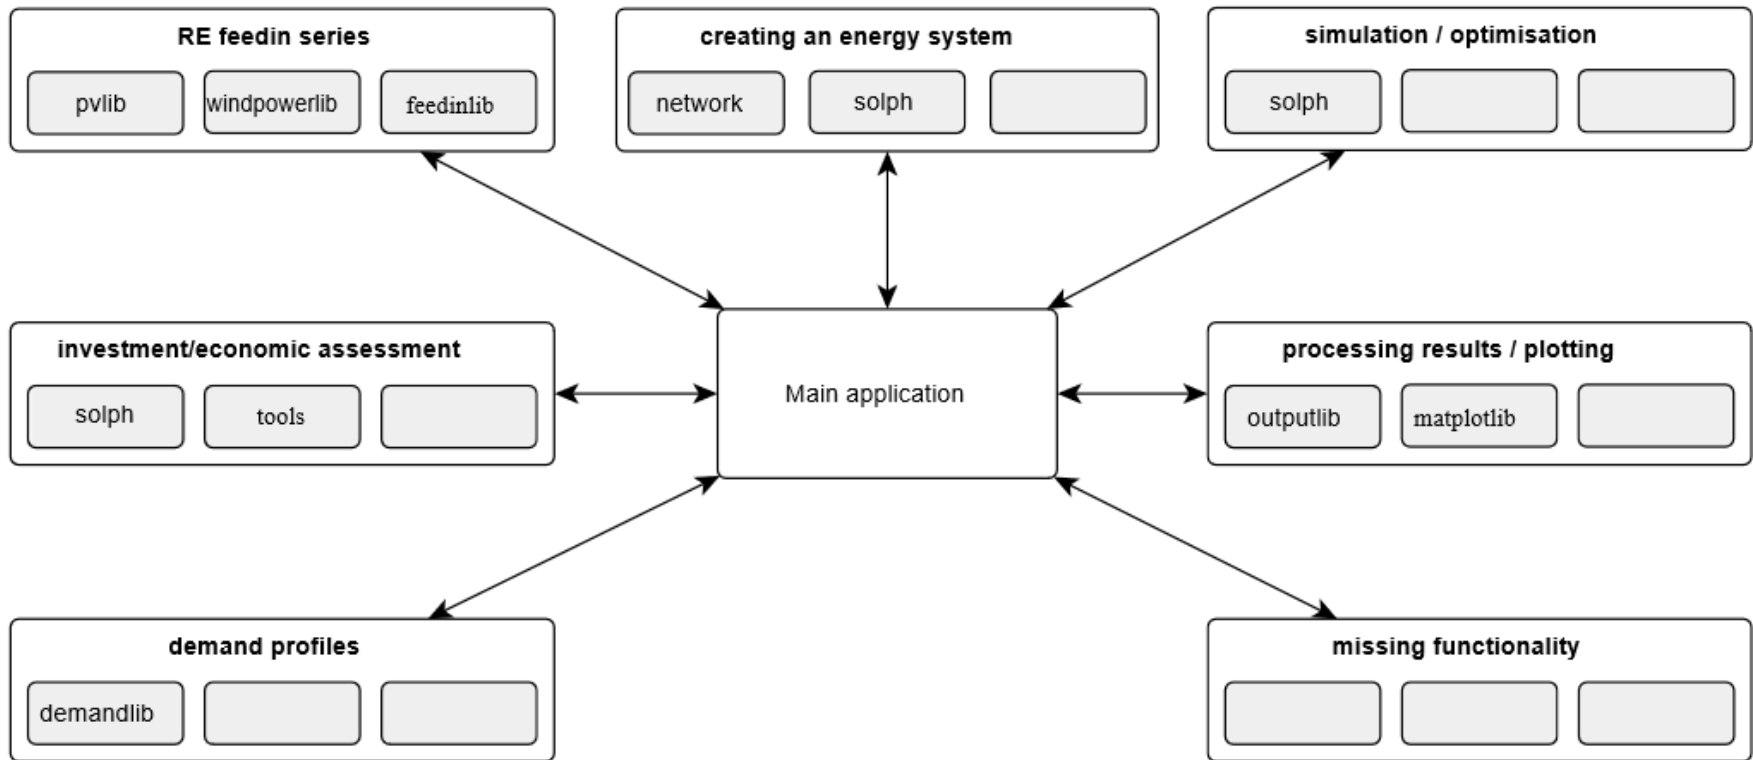

oemof organisation
Open Energy Modelling Framework - A modular open source framework to model energy supply systems
Germany https://oemof.org oemof@rl-institut.de

Repositories 9 People 12

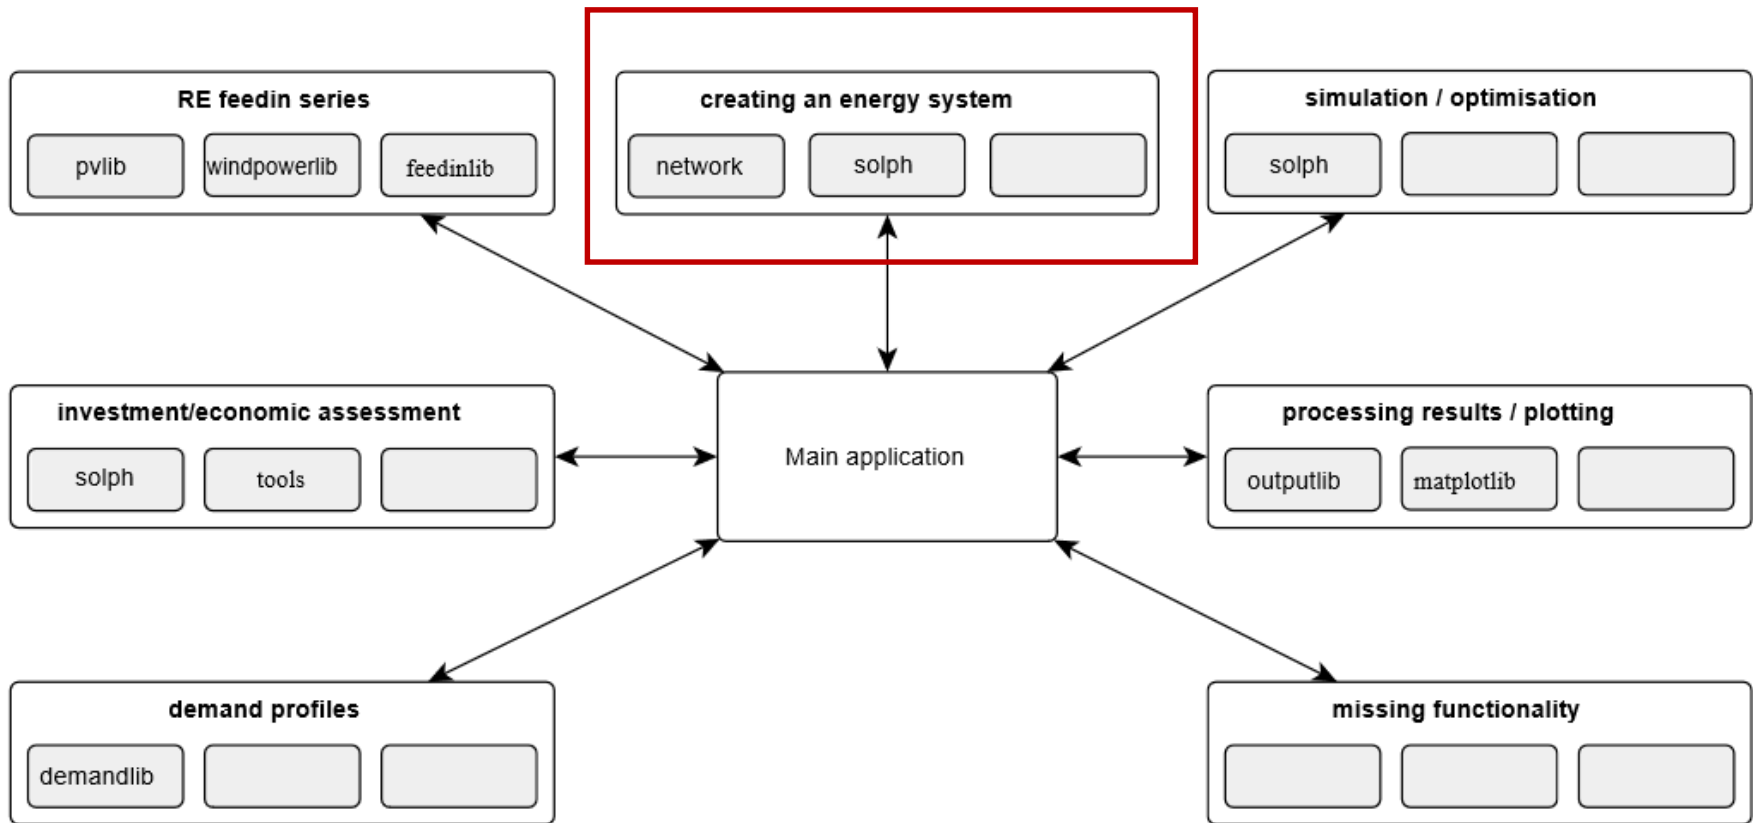

Pinned repositories

- oemof**
Open Energy Modelling Framework - Base packages for energy system modelling and optimisation
Python ★ 57 🍴 31
- feedinlib**
This repository contains implementations of photovoltaic models to calculate electricity generation from a pv installation based on given solar radiation. Furthermore it contains all necessary pre-...
Python ★ 21 🍴 6
- demandlib**
Creating heat and power demand profiles from annual values.
Python ★ 3 🍴 2
- oemof_examples**
A collection of oemof examples and notebooks.
★ 1 🍴 4
- tespy**
Thermal Engineering Systems in Python (TESPy)
Python ★ 3
- organisation**
This repository is created for discussions regarding the oemof developer group
★ 2

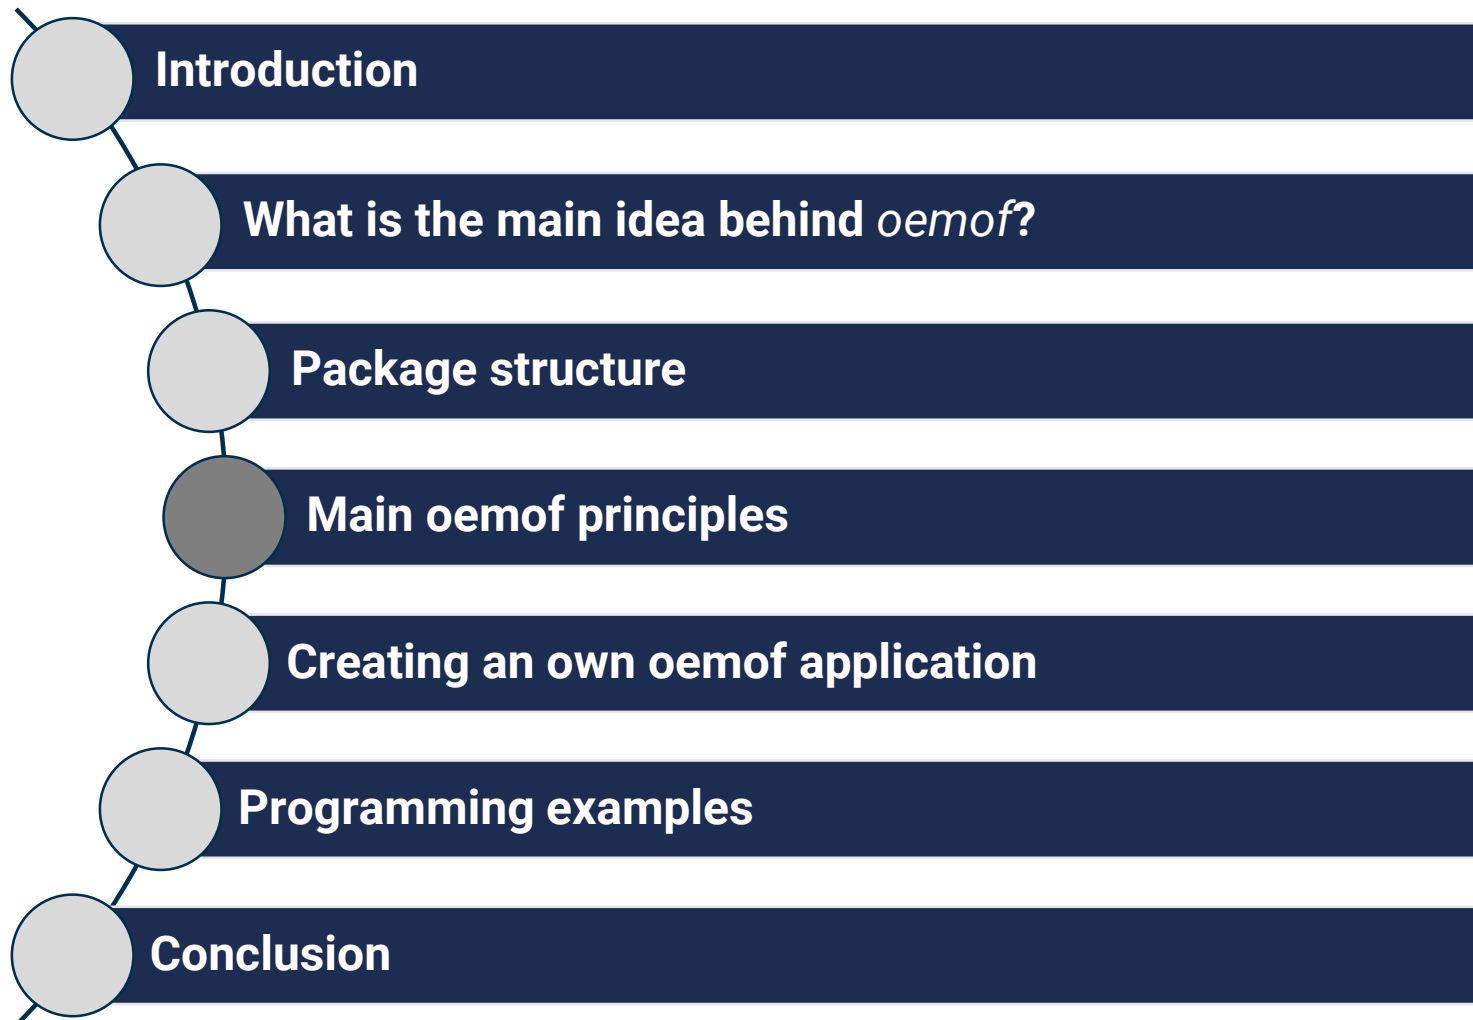

Package structure

Package structure

Agenda

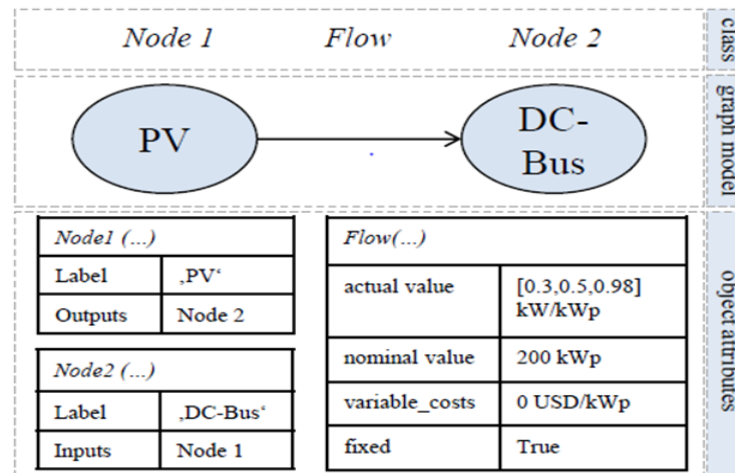

Actual energy system to be simulated

Source/Caption:

Available oemof components

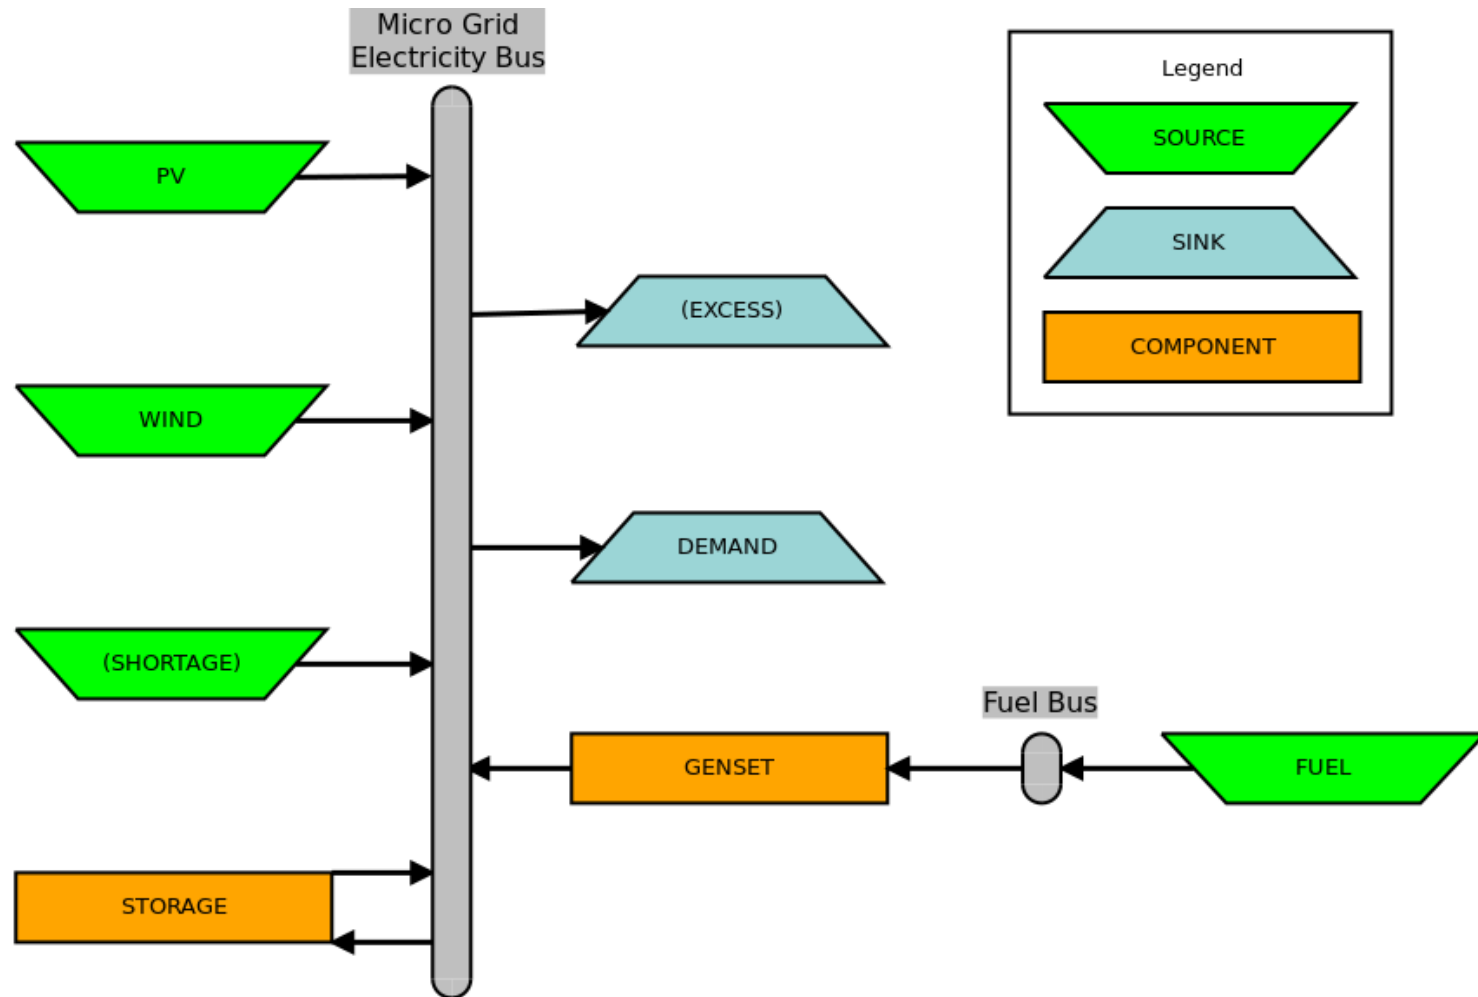

- ▶ Graph-based modelling:
 - ▶ Energy system build by Nodes, which are uni-laterally connected with Flows

- ▶ Main node classes / components:

Simplified, oemof-compatible system

Optimizing with oemof – Objective value

- ▶ Oemof generates a linear equation system describing the energy system model
- ▶ Solves for the minimal objective value (total costs)
- ▶ Target function:

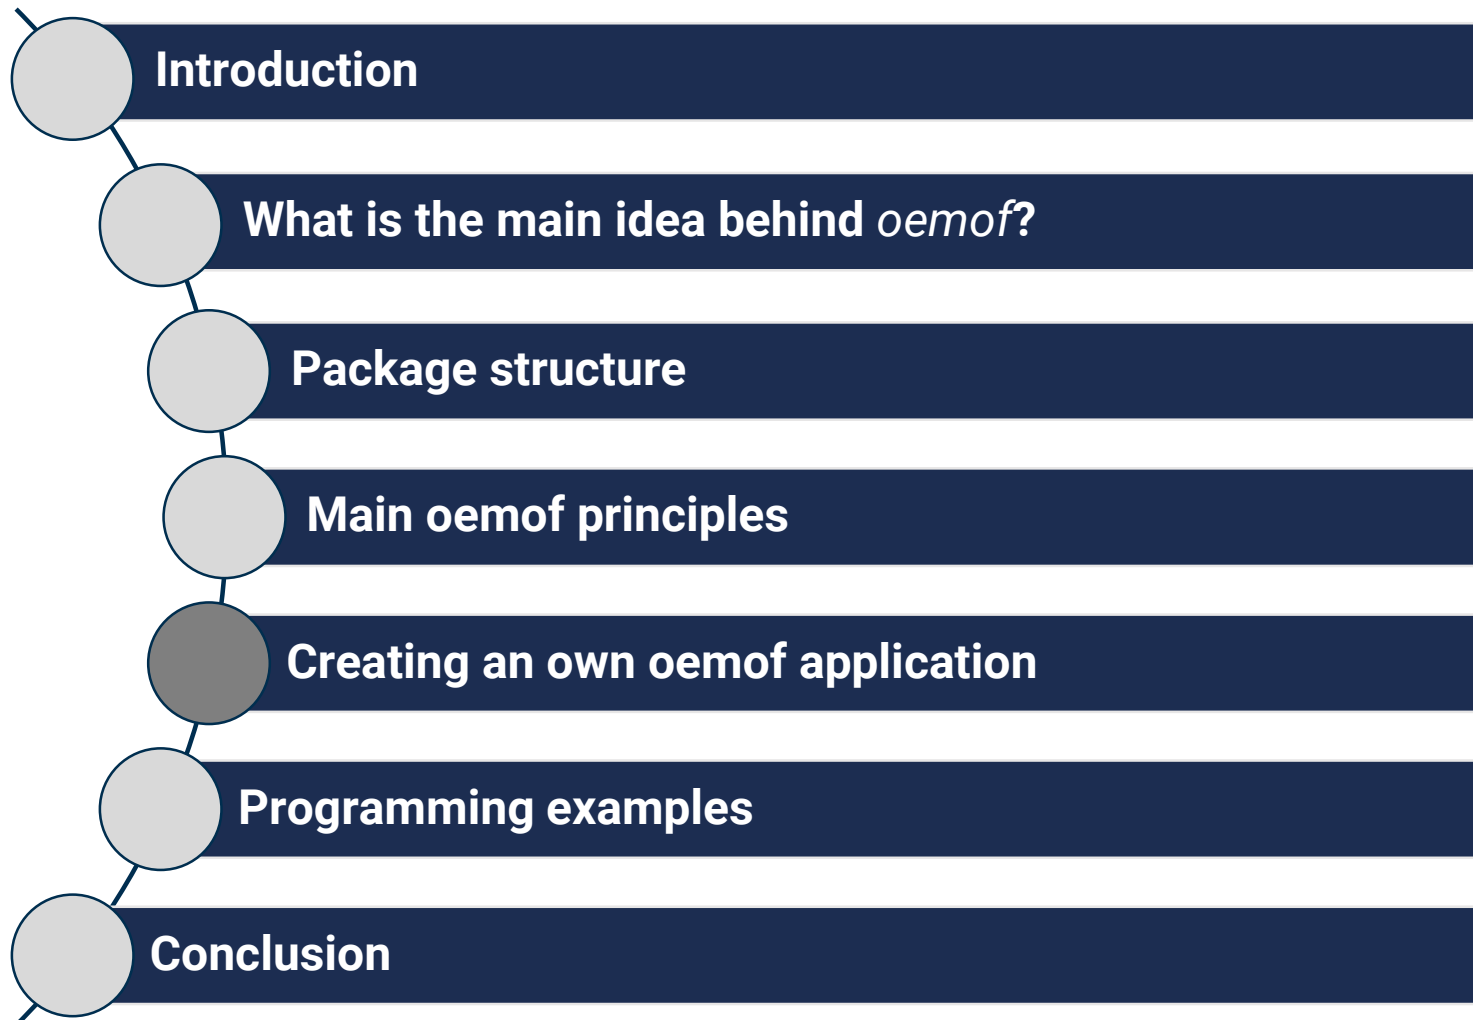

$$\min \sum_i (Capex(i) * CRF(i) + Opex_{fix}(i)) * P_{inst}(i) + \sum_i \sum_t Opex_{var}(i) * E_{gen}(i, t)$$

$i \in \{WEA, PV, BHKW, Speicher\}$

$t \in \{1...8760\}$

Capex	Capital expenditure	EUR/kW
CRF	Capital recovery factor	-
Opex _{fix}	Fixed operational expenditure	EUR/(kW*a)
Opex _{var}	Variable operational expenditure	EUR/kWh
P _{inst}	Capacity of component	kW
E _{gen}	Generated electricity per timestep	kWh
i	Index of system components	-
t	Index of time steps	-

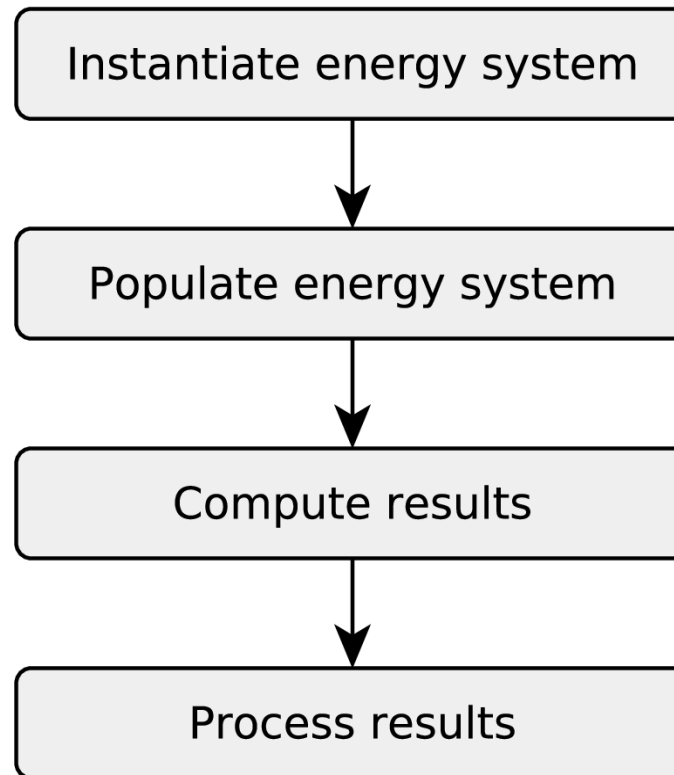

Agenda

- ▶ Necessary to install:
 - ▶ Python programming environment (eg. pycharm)
 - ▶ Package manager (eg. miniconda)
 - ▶ Solver (eg. coinor-cbc)
 - ▶ Python library oemof

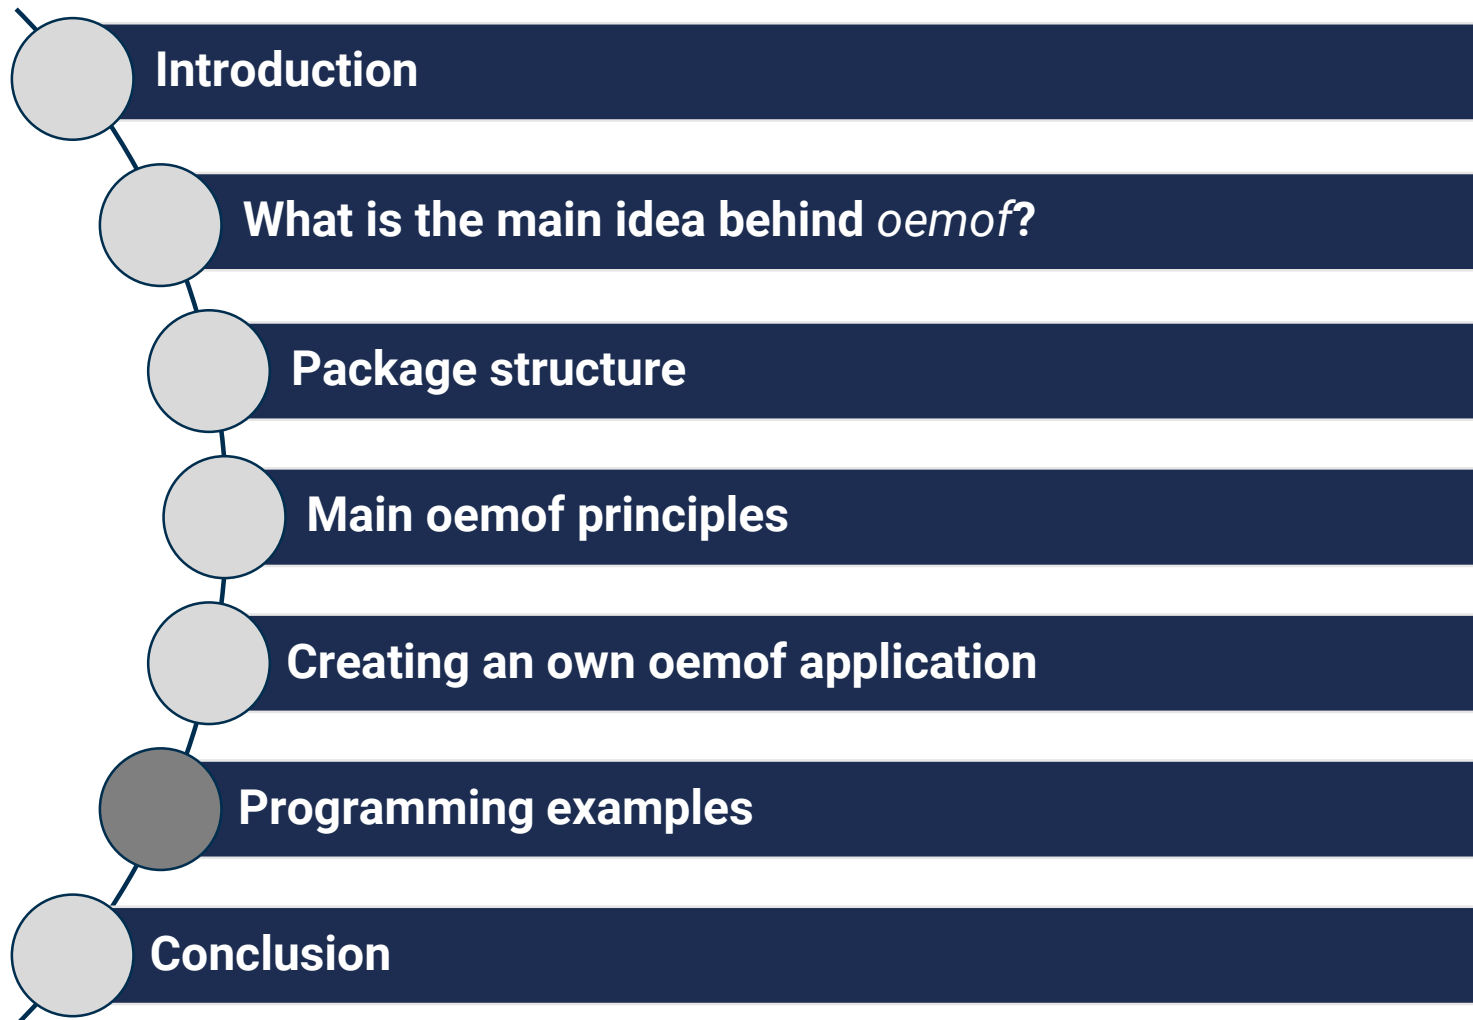

- ▶ More information:
 - ▶ Slides: Oemof_Workshop_02_Installation.pptx
 - ▶ Youtube tutorial for Windows:
https://www.youtube.com/watch?v=eFvoM36_szM

Building an own oemof application

- ▶ Economic parameters:
 - ▶ Fix and variable cost of the system components
 - ▶ For internal processing of costs: WACC, project lifetime)
- ▶ Timeseries with values for each timestep:
 - ▶ Sources (non-dispatchable generation)
 - ▶ Sinks (non-dispatchable demands)
- ▶ Technical parameters:
 - ▶ Transformer (eg. generator) efficiencies
 - ▶ Technical storage parameters

Agenda

Download coding examples

- ▶ Download git repository of this workshop from git:
https://github.com/smartie2076/oemof_workshop
- ▶ To execute jupyter notebooks:
 - ▶ Open terminal, move to folder „/oemof_workshop“
 - ▶ Create environment and install requirements

```
pip install -r requirements.txt
```
 - ▶ Execute

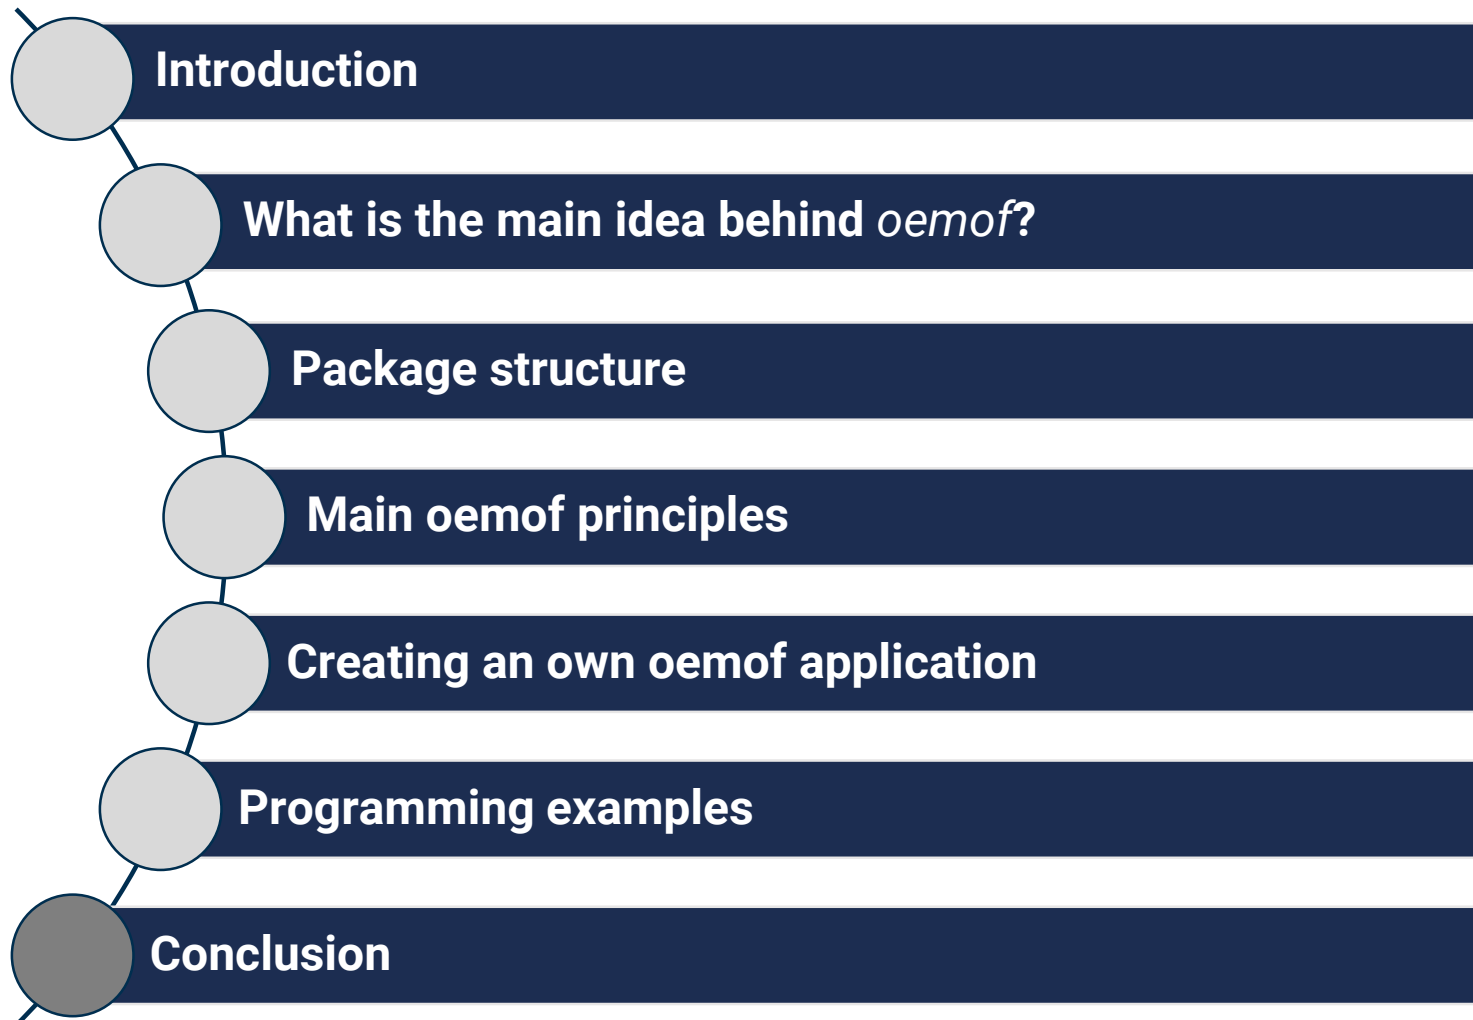

```
jupyter notebooks
```

- ▶ Dispatch optimization with fixed capacities:
./Day_1_Oemof_Basics/1a_tutorial_dispatch.ipynb
- ▶ Investment and dispatch optimization:
./Day_1_Oemof_Basics/2a_tutorial_investment_optimization.ipynb

- ▶ Dispatch optimization with fixed capacities:
 \Day_1_Oemof_Basics\1b_task_dispatch.py
- ▶ Investment and dispatch optimization:
 \Day_1_Oemof_Basics\2b_task_investment_optimization.py

→ Solutions are provided

Agenda

- ▶ Download and use oemof
- ▶ Register on and post and discuss issues on:
<https://forum.openmod-initiative.org/tags/c/qa/oemof>
- ▶ Indicate or post own projects/coding examples via mail or github
- ▶ Find documentation on:
<http://oemof.readthedocs.io/en/stable/>
 - ▶ Register errors in documentation via mail or issue or pull request (github)
- ▶ Find oemof examples on:
https://github.com/oemof/oemof_examples

- ▶ Documentation
 - ▶ Register or correct spelling and grammar mistakes
 - ▶ Re-write sections that are unclear
 - ▶ Add missing explanations
- ▶ Code
 - ▶ Register or fix bugs
 - ▶ Fix docstring or code layout
 - ▶ Create and submit own components or constraints
 - ▶ Add own features or implement requested features
- ▶ When developing: Fork/clone oemof repository:
<http://github.com/oemof/oemof>

- ▶ Yearly user&developer meetings

- ▶ Half-yearly developer meetings
 - ▶ Next meeting: 4. to 6.12.2019, Berlin
 - ▶ Register and develop agenda on:
<https://oemof.org/2019/09/11/oemof-turns-5-anniversary-developer-meeting-in-december-2019/>

THANK YOU FOR YOUR ATTENTION !
